	Action	Voiceover
1.	We fly towards a small world – like the planet in the story The Little Prince.	Sub-Saharan Africa is one of the fastest- growing economies in the world.
	Around the edge of the planet are different regions representing the country:	
	- A modern city of gleaming skyscrapers	
	- The pyramids of Giza	
	- A savannah, including a giraffe and elephant	
	We don't dwell on these – instead we push in to the city.	
2.	We're on a busy street in our contemporary African city. High-end stores surrounded by glass and chrome skyscrapers. We could be	The cities are booming and as a result, E- commerce is increasing rapidly. In fact, by 2025, 690 million sub-Saharan Africans will have smartphones - and ecommerce will be worth \$75 billion.
	in New York.	
	Large in the foreground, a wifi-style signal is transmitted from a smartphone (we don't see the owner).	
	Luxury cars drive past, revealing the figures "690 million" and "\$75 billion".	
3.	In the foreground, our smartphone becomes more prominent, revealing the screen.	It's an exciting time for consumers and a huge opportunity for online businesses.
	On it we see an e-commerce site.	
	A finger pushes the "buy" button.	
4.	The background transforms into a map of Africa. The map is split into a pie chart with two segments of roughly 20% and 80% - the 80% portion has a picture of a credit card with a cross through it.	But with less than 20% of the population having access to traditional online payment methods, like credit or debit cards, it's vital for merchants to accept a local alternative like M-Pesa.
	Our smartphone screen changes to a "Payment Method" screen.	
	One of the options is M-Pesa, which the finger chooses.	

	The screen says "Thank-you for your purchase!"	
5.	The phone disappears leaving our map now in full view. The pie chart spins until the continent is a single M-Pesa colour. The country borders are indicated. Icons representing M-Pesa land on the territories where it is active. The words Kenya, Tanzania, Mozambique, Ghana, Lesotho, Egypt and DRC are on the icons at the appropriate places.	M-Pesa is Africa's leading local payment method, dominating the market.
6.	We pull out of the map and see that it is a poster on the wall of a store. The words "40 million Customers" appear on the map. In the store we see a prominent till at the service counter. A customer uses M-Pesa to pay and the till screen displays the figure "€147bn".	40 million customers already use this safe, trusted and affordable way to pay, send and receive money, get short-term loans and much more. In fact, in 2019, our customers used M- Pesa for transactions worth €147bn.
7.	Cut to our small planet with its city, pyramid and savannah. A quick spin, and now it has the Statue of Liberty, Mount Rushmore and a city of skyscrapers on it. Push back into the city and we're inside the offices of a smart tech business. The statue of Liberty can be seen out the window. On screen we see the single interface, connecting to all 7 markets represented by their icons. It looks like 7 cables reaching out from a single point. A padlock unlocks near the centre – and the orders start flooding in, indicated by lots of icons moving down the wire to the centre.	Accepting M-Pesa is really straightforward. With a single integration via OpenAPI, our slick, simple & secure user interface unlocks all 7 of our markets seamlessly. Giving you access to 40 million new customers in one easy step. And we're growing fast.
8.	Transition back to our map of Africa as a background. As each word is spoken, an icon animates representing that key selling point. Words appear beside it as follows: Icon 1: M-Pesa is the leading local payment method in Africa (40m+ customers)	Leading, trusted, secure and simple. Add Pay by M-Pesa to your service and discover a whole new market in Africa.

	Icon 2: M-Pesa is recognised as a trusted brand in the region			
	Icon 3: M-Pesa has a slick, simple & secure UX			
	Icon 4: A single integration unlocks M- Pesa in 7 markets (icons for 7 markets appear too)			
9.	The logo animates while the key selling points above stay on screen.
